

FUNDAÇÃO CALOUSTE GULBENKIAN

Instituto Gulbenkian de Ciência

A postdoctoral position is immediately available with the Innate Behavior Group at the Instituto Gulbenkian de Ciência (IGC) located near Lisbon, Portugal. We use a combined behavioral, genetic, imaging and electrophysiological approach to determine how defined neural circuits and their activation elicit specific behaviors. We use *Drosophila melanogaster* because flies exhibit complex behaviors that are controlled by a nervous system that is numerically five orders of magnitude simpler than that of vertebrates.

Please go to <http://www.igc.gulbenkian.pt/> for information about the group and the institute.

We seek creative, highly motivated candidates with the ability to work independently and a strong background in molecular biology. Previous expertise in electrophysiological or imaging techniques is an advantage.

Interested candidates should send CV, cover letter, and contact information of 2-3 references to vasconcelos@igc.gulbenkian.pt.
